INSIDE

2 A New Standard in Strategy Performance
3 Gains Realized Every Year!
4 Five New Premier Strategies
5 The Power of Strategy Aggregation
6 Special Bonus Strategy: Boost Performance Beyond 40% Per Year
One of the key reasons our customers are so loyal is our relentless focus on Automated Trading technology. Ever since OmniTrader was first released in 1994, my staff and I have been dedicated to achieving the highest possible level of profitability in our automated Strategies.

Last year, we raised the bar with the introduction of XLS-19 V2, a Strategy that showed historical performance exceeding 30% per year going back to 2007. As we sought to reach the next level of performance, we began experimenting with key variations on the XLS theme using a collection of non-correlated indicators. The result is nothing short of amazing.

37% Average Annual Return since 2001!

What we have consistently learned is, Strategies that work need to be very selective, trading rarely. This approach leads to strong returns on a per-trade basis, but often leaves much of the account in cash. If multiple non-correlated Strategies are combined, results improve because more capital is being utilized.

By combining 5 proprietary Reversion to Mean Strategies, we are now achieving the impressive mark of 37% average annual returns! The ramifications of this discovery are far-reaching.

Raising the Bar

This NEW Strategy Suite raises the bar on what is possible and expected in terms of automated trading performance. We tested these new Strategies on many different lists, including the S&P 100, S&P 500, Russell 1000, Nasdaq 100 and Dow 30. In each case, the Strategies vastly outperformed the market.

Your Personal Money Machine

Last year, we released Auto Trade in OmniTrader 2017. Since then, users have been automating their trading with Strategies we have released. The release of the X-Suite is going to make it possible for users to reach new heights in performance.

A Special Bonus

As you will discover in the next four pages, the X-Suite is a powerful group of Strategies that has not only made money every year since 2001, but also beat the market almost every year. However, with just one extra Strategy, the resulting package DOES in fact beat the market every year – and reaches the impressive mark of 41% average annual returns! So, in our package offer we have done something unprecedented. I don't want to spoil the surprise here. (Hint: it's on page 6.)

Watch it in Action RISK-FREE for 90 days!

What if you really could get 41% returns in the market? What would that be worth? Order before the deadline and get the entire package for just $995 – a 50% discount off the regular price of $1,995.

We want you to experience the Power of X. If you aren't totally impressed, we will refund your purchase price. I am very excited about the X-Suite. I've already activated it for my own trading. Now, it's your turn! Thank you for being a Nirvana customer.

Sincerely,

Ed Downs
CEO and Founder
Our Best Performer – Ever.
Profitable. Consistent. Robust.

When our developers set out to create the Strategy Suite, our goal was to beat the performance of other Strategies, with consistent gains and low draw downs.

The X-Suite is the result of this work. The key to steady performance is the aggregation of really great Strategies that have complementary trades, so they maintain trade allocation in an account to maximize gains and minimize risk.

Looking closely at the simulated equity curve, we see several periods in which the X-Suite made considerably higher gains than the market, especially when the market had significant losses in 2001 and 2008.

Average Return: 37% per Year

Made Money EVERY YEAR Even When the Market Was Down

The Secret to the X-Suite’s Performance

How is the X-Suite able to generate this kind of performance? Two words:

Strategy Aggregation.

It’s easy to create a Strategy that fires a lot of Signals. However, in order to get the most accurate signals, Strategies must employ sophisticated filters that screen out all but the most probable candidates. This results in fewer trades.

While constructing the X-Suite, we worked to create 5 generally un-correlated Strategies that would work together to effectively trade a list of stocks.

While some of the Signals from the X-Suite occur at the same time, most of them do not. This means more trades and more allocation in an account.

The aggregation of these Premier Strategies provides outstanding performance across any of the major stock lists. On the next page, you’ll see how this special package performs at various allocation settings, giving you the ability to tune it to your personal trading goals.

Strategies in the X-Suite:

The X-Suite aggregates FIVE Premier Strategies that show outstanding performance individually. While the statistics below illustrate the quality of the individual strategies, the REAL power of the X-Suite is realized when you combine these strategies.

Statistics generated on the stocks in the S&P 100 and the NASDAQ 100 in simulation from January 2001 to September 2017.
Select Your Allocation for Higher Returns OR Less Risk

The key to risk reduction is reduced allocation per trade, resulting in more trades and higher diversification.

The equity curve simulations above were run on 3 different allocation values, 5%, 10% and 20% of equity per trade. Given the dramatic differences in returns, why would we want to use a lower allocation?

Looking at the table, we see that at 5% allocation per trade, we get a 16% return with a 4.7% average max draw down. Keep in mind, that is 16% on our account, not what we have invested. This return is made with just 12% of our account at risk, on average.

So, a very conservative way to use the X-Suite is to run it at 5% allocation.

### Allocation %

<td>31%</td>
</tr>
</tbody>
</table>

**High Gains. Reduced Risk.**

If we can get 16% a year with just 12% of our money at risk on average, our account is much better protected. If the market were to correct 20%, our account should show a significantly lower loss than the market.

On the other hand, if we are less concerned about market risk, using 20% allocation gets us into high return potentials of 37% per year – with an average of only 31% of our account invested. That's incredible!

You may be wondering, “With all the advantages offered by the X-Suite: Super Returns, Solid Risk Reduction and steady account growth year after year, what else can be done to improve it?”

Well, we're glad you asked, because it’s time to unveil the Special Bonus we are including in the X-Suite Package...
**Special Bonus:**

**XLS-19 is Included!**

Combined Performance Exceeds 40% Average Return Per Year!

I had mentioned in the introduction that the X-Suite was built from the research we did to create XLS-19, one of our most popular Strategies.

I have good news – we have decided to include XLS-19 in the package!* The performance shown on page 3 is based on using the X-Suite by itself. As great as that performance is, we have found that by adding XLS-19, performance improves dramatically, especially in difficult market years.

To the right is an equity curve showing our test of the combination of the X-Suite and XLS-19. This special combo shows an astounding 41% per year average performance! The table highlights how in difficult markets, XLS-19 helps the X-Suite dramatically outperform the market.

Take advantage of this special offer today to get both the X-Suite AND XLS-19 for one low purchase price.

– Ed Downs
