

Ed's

RocketTrade Method

A Hands-On Course
by Ed Downs

Ed's

RocketTrade Method

Part III **Reducing Risk**

Part 3 – Reducing Risk

Agenda:

- **Kinds of Risk:**
Market versus Security Exposure
- **Ways to Diversify:**
Accumulating Different Things.
- **Balancing Positions:**
How to Play Both Sides of the Market
- **Hedging:**
Using Options to Hedge Against Risk

Ed's

RocketTrade Method

Kinds of Risk

The 3 Kinds of Risk

We want to protect our account from:

- Market Risk
- Technical Risk
- Allocation
(Exposure) Risk

Market Risk

The Entire Market
can Correct 10% or
More in a Day

As it did with
COVID-19

Technical Risk

Proximity to
Support and
Resistance
indicate
Technical Risk
(or opportunity,
as with this Short
Trade).

Allocation (Single Trade Exposure)

“Don’t Put All Your Eggs in One Basket.”

Many Trades with Small Allocation Means **No Single Trade** can Sink Your Account.

If Market Drops 10%
5% Trade – 0.5% Loss
2% Trade – 0.2% Loss

Portfolio

PLTR	96	1/25/2021 2:41:34 PM	36.3	32	(\$412.80)	-11.85%

Allocation (Beta Exposure)

Low-Priced Stocks are more volatile (they move more!)

Another way to say this is their Beta is High

Beta Should be Inverse to Allocation

$B \leq 1.0$	100% of Normal Trade Allocation
$B > 1.0$ and $B \leq 2.0$	50% of Normal Trade Allocation
$B > 2.0$ and $B \leq 3.0$	30% of Normal Trade Allocation

Ed's

RocketTrade Method

Diversify Using Industry Groups

Industry Groups

By Adding IndSubGroup to the Focus List, we can determine if we are entering too many positions in any correlated group.

(We can also use it to see if there is consensus in any group, improving our odds on a single trade.)

G	Symbol	Sig	Bars	IndSubGrp	Clos
<input type="checkbox"/>	CLNE			UTILITY-GAS DISTRIBUTION

Ed's

RocketTrade Method

Balancing Positions

Long vs. Short Exposure

You can use Moving Averages to adjust Long vs. Short Exposure.

Use Normal Stops but **Replace Trades** in the Direction of the Market

Using the 20-Period ZMA

Ed's

RocketTrade Method

Hedging

Why Hedge with Options?

A Small Option Position can hedge a much larger account.

IRA's do not allow short sales but with a **special election**, can allow option purchases.

What is UVXY?

“The ProShares Ultra VIX is designed to return 150% of the return of short-term VIX futures.”

When Volatility increases, so does VIX.

UVXY amplifies the moves.

	A	B	%
SPY	337 → 240		29%
UVXY	11 → 110		900%

We can use UVXY to counter market risk.

Comparing Various Moves

When to Hedge

A Hedge Can be Applied at all times.

But if you want to TIME the Hedge...

UVXY forming a solid Support Level and Trading Range is a typical precursor to a market move.

UVXY Options 2-3 Weeks Out

Option Chain for UVXY

Feb 12.5 Call . . . \$0.56 (Ask)

Feb 9.5 Put . . . \$0.48 (Bid)

Synthetic Long

Buy Feb \$12.5 Call \$0.56

Sell Feb \$9.5 Put \$0.48

Net Credit \$8 per Contract

One Contract

Margin: **\$500** ← Broker Req.

Risk: \$100 (20%)

Gain: \$500 (100%)

10 Contracts:

\$5,000 Margin

\$80 Cost

(protects account from a drop of \$5,000 or 5%)

Cost Comparison

BUY CALL

Buy Feb \$12.5 Call \$0.56

Cost \$56 per Contract

One Contract:

Margin: \$56

Risk: \$56 (100%)

Gain: \$250 (400%)

10 Contracts:

\$560 Margin

\$560 Cost

Cost is \$560 (expires)

2x the
Margin

1/10 the
Cost

Moves Sideways
to Expiration

SYNTHETIC

Buy Feb \$12.5 Call \$0.56

Sell Feb \$9.5 Put \$0.48

Net Credit \$8 per Contract

One Contract

Margin: \$500 ← Broker Req.

Risk: \$100 (20%)

Gain: \$500 (100%)

10 Contracts:

\$5,000 Margin

\$80 Cost

Cost is \$0 (both expire)

Over-Achieving

If something like the Covid Correction were to happen again, the Call Options will get extremely valuable.

A Call that cost \$1.60 when UVXY was at 10 will be worth \$100 when UVXY reaches \$110.

10 Contracts will be worth \$100,000

Closing the Hedge

When Trading a Synthetic Option Position, **Sale of the Naked Put** pays for the Call.

That's Good.

BUT, if UVXY starts trending below the Support Level, you MUST close the Hedge.

Selling the Call and Covering the Put results in risk of about 20% of the Margin used for the hedge.

However, if UVXY goes sideways, both options expire worthless and THE HEDGE COST is \$0.
