### Nirvana's Trading Agenda

Over the past year, we have engaged an internal project to develop Real Time **Trading** Approaches to deploy on a large account that we were given access to.

### Why the Inner Circle?

Our Trading Team has been focused on automated trading methods and deploying them in live accounts.

We are raising funds to complete this work and deploy these methods for Inner Circle Members.

In return for <u>One Time Seat</u> <u>Purchases</u>, we are providing investor access to the **Trade Streams** we are creating.

### How it Works

**Collective 2** facilitates the distribution of trades into accounts at multiple brokers.

**Each Trade System** trades into a Trade Leader Strategy at C2.

Each trade is <u>instantly sent to</u> <u>anyone's account</u> who is subscribed.

### **Current Research**

### I.C. Throttle One

### The Concept Behind Throttle One

<u>Any Index is an</u> <u>Average</u>. At almost any time, there will be Stocks going both Up and Down.

We want to <u>Buy the</u> <u>Strong Stocks</u> when the index itself is going Up, and <u>Sell the Weak</u> <u>Stocks</u> when the Index is going Down.

### VisualTrader's Proprietary Instrumentation

The Leading Indicator provides a Composite View of the movement of all stocks in the Index.

We can read the value of the Leading Indicator to drive the **Trade Throttle** in the direction of the market.

### What is the Trade Throttle?

The Throttle is a **Trading Interface in VisualTrader** that can establish Direction, Allocation, and Exits.

Trades can be fired off on multiple instruments, in the direction of Strength and Size with just a few clicks.

#### Procedure:

- 1. Set Direction
- 2. Set Equity
- 3. Click Enter Trades.

### VT Simulations: IC Throttle One

Throttle Simulation trading Long and Short. The simulation made 5.6% in 5 days, which is a 5,000% annualized return.

Sim Demo

### Seeing it in Action

Let's take a look at how VisualTrader can used to automatically trade the market each day.

### Member News

Throttle Research and other News has been carefully documented for all Inner Circle Members in the News and Information tab of the Inner Circle site.

Updates are made weekly.

Ed Downs

## **Our Trading Approach**

### **Trading for Consistent Gains**

Many Strategies can make money over time if draw downs are not a concern.

In **The Inner Circle**, we **Only** deploy Strategies that have shown the ability to makes <u>consistent gains</u> over <u>shorter time periods</u> with <u>low draw downs</u>.

### Monitored Trading

#### Collective2.com

### All Trading Machines and C2 Connections are closely monitored during trading hours by the Nirvana Team.

## **Equities Trading**

### IC Throttle One

### IC FAANG

The Strategy was designed to trade Breakouts on the FAANG\* stocks near the Open, as shown here.

\* FB (META), AMZN, AAPL, NFLX, GOOG

### IC FAANG

Simulation on the FAANG stocks only. Performance vs. the Market is very good.

We are adding more liquid stocks to smooth the equity curve. The new Strategy will be called IC Equity Breakouts.

### **Options Trading**

### The First "IC Option Income" Strategy

The first version of this Strategy sold Naked Puts ONLY.

Selling Puts works well in sideways to bullish markets. <u>However, the market corrected</u> <u>shortly after release</u> (Feb 14).

Put-Selling then generated income as the Strategy rallied from the March Low to get back to starting balance.

### IC Option Income (2)

- Operates under ATM Control using Bullish/ Bearish Market States.
- Sells Puts <u>AND Calls</u> on stocks in the S&P 100 depending on Market State
- Very Steady Curve with 44% Annual Return on margin.

### IC Option Income (2) Performance

### 6-Month Simulation

• Up over 20% Jan-May '22

• The Market was DOWN over 12% in the same period.

2022 Performance Simulation (6/1/22).

### IC Option Income (2) - Improvements

We saw very smooth appreciation until the marked corrected. The draw down was caused by waiting to cover the Puts at the next Open.

We added Intra-Day Monitoring to exit during the session based on the underlier.

### **Futures Trading**

### Crude Oil (CL)

Deployed at the end of March. Trades the standard CL Contract.

Up 27.6%+ since launch.

The Strategy was changed to reduce draw downs, which resulted in lower performance.

So, Jeff worked to improve it...

#### IC CL All Sessions

2022			+14.0%	+9.0%	+2.8%	-	(0.1%)	-					+27.6%

As of 8/23/22

### Trade Plan Advancements

Jeff has been testing a new Trade Plan concept that generates a <u>higher</u> <u>probability of a winning</u> <u>trade</u>.

"Buy 3, Sell 2, Buy 1" avoids draw downs while staying in-trade to catch the runners.

### Crude Oil (CL) – Using the New Trade Plan

Recent tests produced the equity curve shown here.

We are waiting for our programmer to make an important fix to Trade Plans.

When deployed, <u>this Strategy will</u> <u>trade 3 contracts</u>.

Notice will be provided.

### Crude Oil (CL) New Trade Plan Deployed

The CL Strategy has seen improved performance since the new Trade Plan was deployed in C2.

As of 8/23/22

### Natural Gas (NG)

Simulation shows a 200% gain in the past 2 months.

Calmar Ratio: 150

Notice that it is generally flat until a move occurs.

Now Live on C2.

### IC NG deployed July 1

NG is performing like the simulation, with sudden moves after flat periods.

IC NG was deployed July 1 and is now up nearly 9%.

As of 8/23/22

### NEW Index Futures Strategies

### IC RTY Breakouts

The Same Stop Method was applied to the Russell 2000 e-mini contract.

Dropped from 5 Minutes to 2 Minutes to more quickly engage the breakout impulse and added a Trending Strategy.

IC Russell shows consistent gains while avoiding excessive drawdowns.

Simulation include sExchange Fees and Commissions

### **Inner Circle Goals**

### **Our Inner Circle Goal**

Our goal is to be able to eventually trade up to \$25 Million using intraday trading approaches.

- Trading in Real Time offers Less Risk – In at Open, Out at Close
- We take advantage of the Movement of Strong/Weak Stocks and Futures during trading hours.

A good example of risk in overnight markets is the recent overnight volatility.

Most Equities Strategies (like Throttle) can extend to other Indexes or ETFs with Industry Group Components.

The plan is to develop multiple automations on different markets to create multiple Trade Streams for Collective 2.

### Joining the Inner Circle

### A Very Special, Limited Offer

When we first created **The Inner Circle**, we set a price of \$25,000 per Seat, which is low if our success continues.

We have decided to bring on <u>5 additional Members</u>, and have set the price to \$10k this week to facilitate this goal.
